USRADAR INC.

SUBSURFACE IMAGING SYSTEMS

QUANTUM MINI
CONCRETE SCANNER

The Quantum Mini concrete scanner is the market's first and only true dual-frequency range concrete scanner. With a 1000 MHz antenna for analyzing structures as deep as 72" (1.8m) and a 2000MHz antenna for high-resolution fine analysis of short-range targets, you can expect superior imaging packed into a portable and easy-to-operate system.

PLEASE CALL FOR PRICING

QUANTUM IMAGER

The Quantum Imager is the first true triple frequency range GPR system ever produced. Because the antenna emits three separate signals simultaneously, the user can survey significantly greater depths with higher resolution than any other locating technology without sacrificing middle frequencies which are ideal for locating targets like buried utilities.
